

Bölüm 2: Sıralama Algoritmaları Algoritmaları

Sıralama Algoritmaları

- Alışveriş listelerinden, sosyal medya gönderilerine kadar
 - dijital dünyada sürekli veriyle karşılaşıyoruz.
- Bu verileri etkin bir şekilde kullanabilmek için, düzenli tutmak gerekir.
- Sıralama algoritmaları,
 - Bir listedeki öğeleri belirli bir kritere göre düzenler.
 - Bu kriter,
 - sayısal değer,
 - alfabetik sıra veya
 - tarih olabilir.

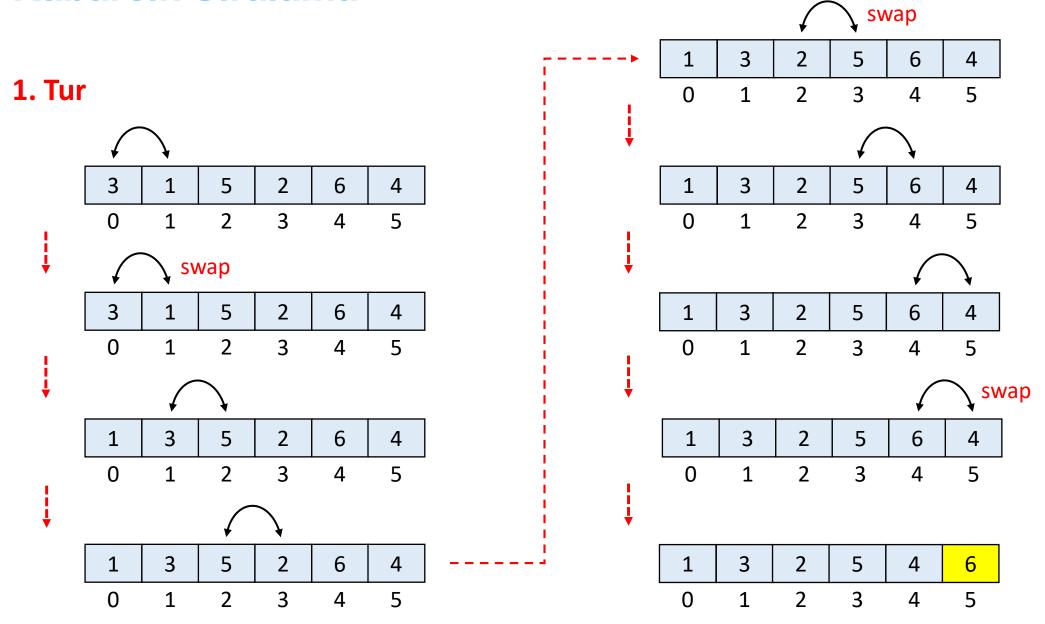

- Farklı sıralama algoritmaları, farklı çalışma prensiplerine sahiptir.
- Kabarcık Sıralama (Bubble Sort):
 - Verileri yan yana karşılaştırarak sıralar.
- Seçerek Sıralama (Selection Sort):
 - En küçük/büyük öğeyi bulup, sona/başa yerleştirir, sonra kalanı sıralar.
- Ekleyerek Sıralama (Insertion Sort):
 - Elemanları doğru sıraya yerleştiriyormuş gibi sıralar.
- Birleştirerek Sıralama (Merge Sort):
 - Listeyi yarıya bölüp sıralar, sonra birleştirir.

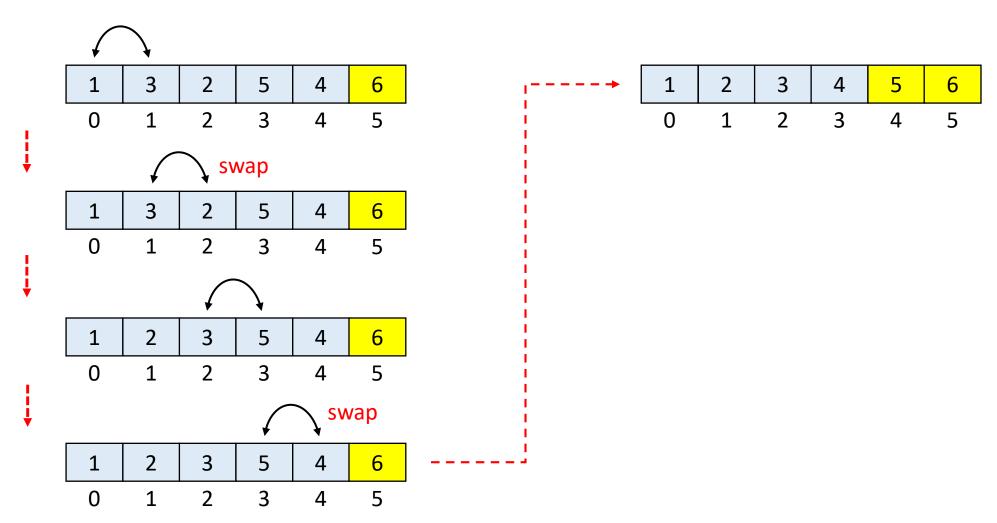

- Her bir adımda dizideki büyük elemanlar dizinin sonuna doğru kaydırılır.
 - Komşu elemanlar ikili olarak birbiriyle karşılaştırılır.
 - Sonuca göre elemanların yerleri değiştirilir.

- Eldeki oyun kartlarını sıralamaya benzer.
- Verilen dizi iki parçaya ayrılır:
 - Sıralı kesim
 - Sırasız kesim
- Sırasız kısımdan ilk eleman, sıralı kısımda doğru konuma yerleştirilir.
- Sırasız kısımda bulunan diğer elemanların kaydırılmasını gerektirir.

Seçmeli Sıralama (Selection Sort)

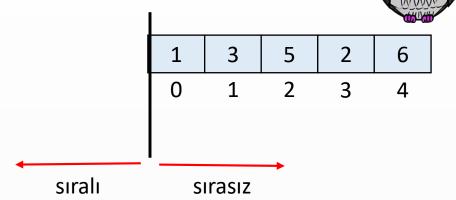

- Verilen dizi iki bölüme ayrılır:
 - Sıralı
 - Sırasız
- Her bir adımda,
 - Sırasız bölümden en küçük eleman bulunur.
 - Sırasız bölümün başındaki eleman ile yer değiştirilir.
 - Yer değiştirmenin ardından sıralı bölümün parçası olur.

- Bir pivot nokta seçilir.
- Pivot noktadan dizi iki parçaya bölünür.
- İki alt parça özyinelemeli olarak sıralanır.

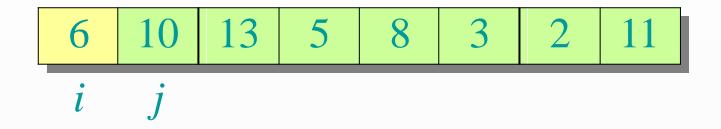

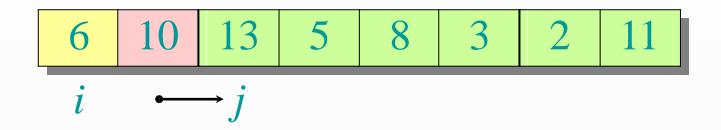

Parçalama (Partitioning) Prosedürü

```
function partition(A, p, q):
   pivot = A[q] // pivot seç
   i = p - 1 // en küçük eleman indisi
   for j from p to q - 1:
       if A[j] <= pivot:</pre>
           i = i + 1
            swap(A[i], A[j])
   swap(A[i + 1], A[q]) // pivot ve elemanı yer değiş
    return i + 1 // parçalamadan sonra pivotun indisi
```

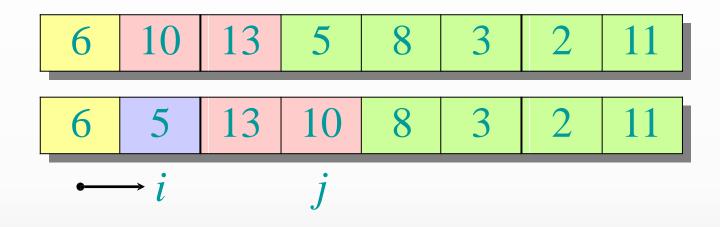

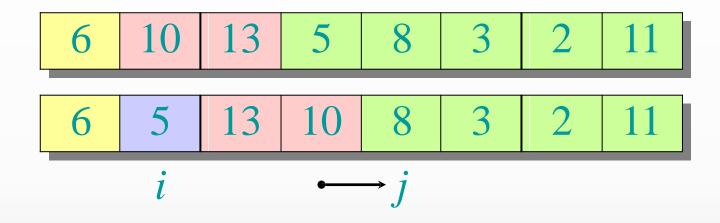

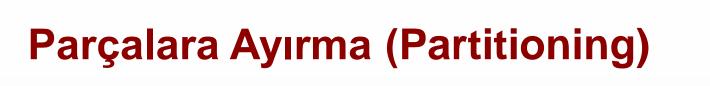

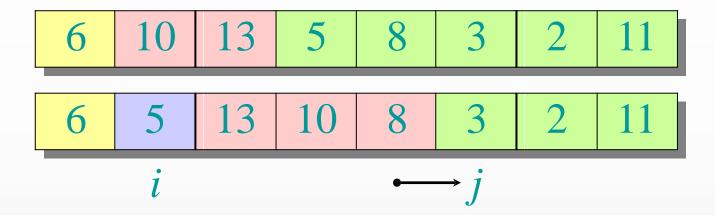

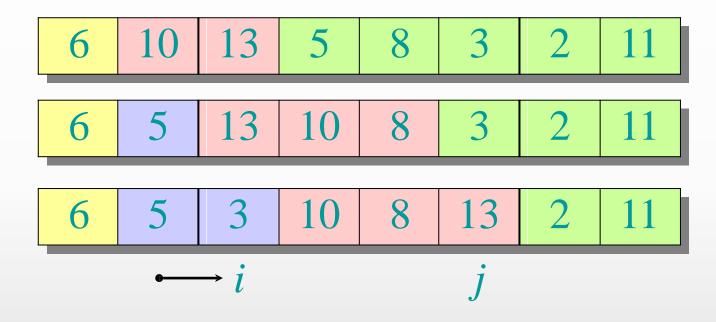

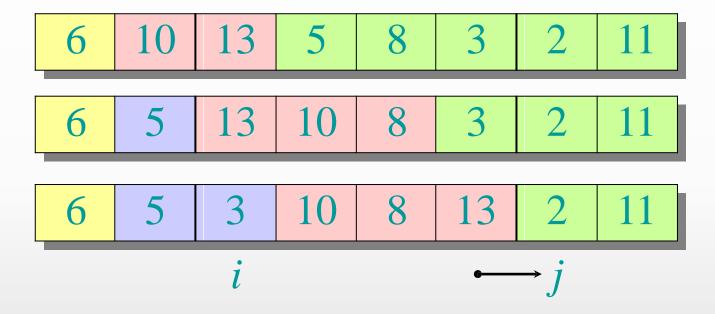

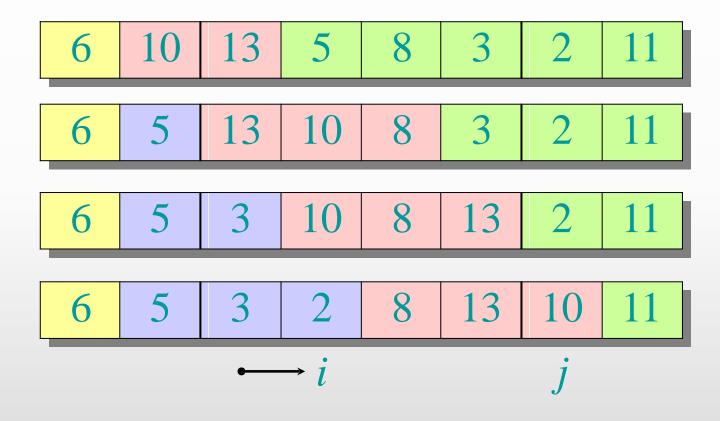

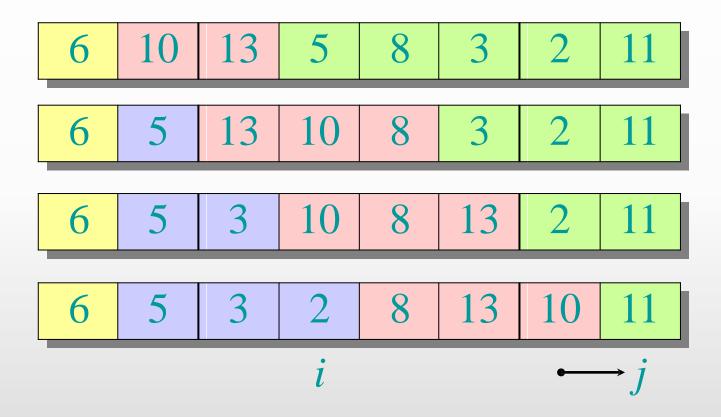

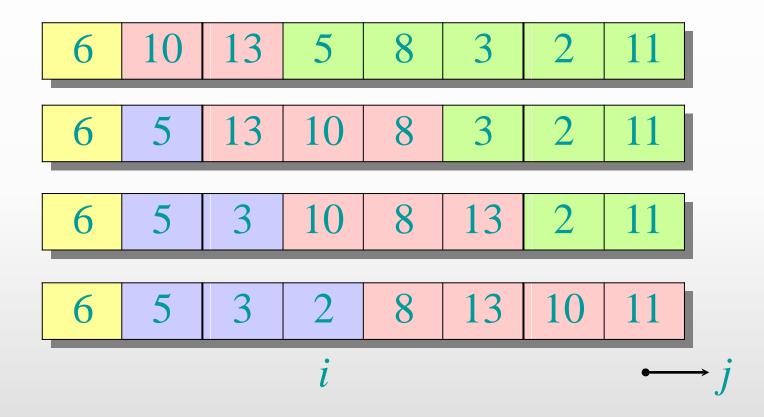

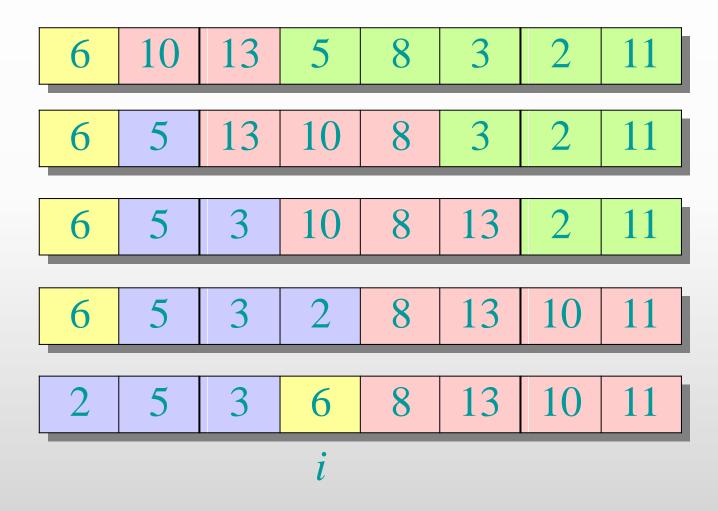

```
QUICKSORT(A, p, r)
if p < r
then q = PARTITION(A, p, r)
   QUICKSORT(A, p, q-1)
   QUICKSORT(A, q+1, r)

ilk çağrı: QUICKSORT(A, 1, n)</pre>
```

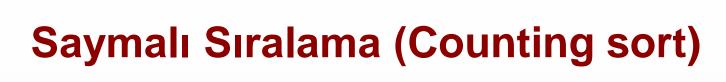

- Elemanlar birbiriyle karşılaştırılmaz.
- Girdi:
 - A[1 . . n],
 - $A[i] \in \{1, 2, ..., k\}$.
- Çıktı:
 - B[1 . . n], sıralı.
- Geçici:
 - C[1 . . k].
